## Alert Detail

| Informational | Authentication Request Identified                                                                                                                                                                                                                                                                                                      |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description   | The given request has been identified as an authentication request. The 'Other Info' field contains a set of key=value lines which identify any relevant fields. If the request is in a context which has an Authentication Method set to "Auto-Detect" then this rule will change the authentication to match the request identified. |
| URL           | <a href="http://localhost:3000/api/auth/login">http://localhost:3000/api/auth/login</a>                                                                                                                                                                                                                                                |
| Node Name     | http://localhost:3000/api/auth/login ()({email,password})                                                                                                                                                                                                                                                                              |
| Method        | POST                                                                                                                                                                                                                                                                                                                                   |

| Informational | Session Management Response Identified                                                                                                                                                                                                                                                                                                                                            |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Description   | The given response has been identified as containing a session management token. The 'Other Info' field contains a set of header tokens that can be used in the Header Based Session Management Method. If the request is in a context which has a Session Management Method set to "Auto-Detect" then this rule will change the session management to use the tokens identified. |

| Instances     | 2                                                                                                                                                                                                                                                                                                                                                                                 |
| Solution      | This is an informational alert rather than a vulnerability and so there is nothing to fix.                                                                                                                                                                                                                                                                                        |
